

OPTICAL GAS IMAGING

INFRARED CAMERAS FOR GAS LEAK DETECTION

MAKE INVISIBLE GASES VISIBLE

SAVE LIVES, INCREASE REVENUE

A facility can have thousands of connections and fittings that require regular inspection, but the reality is only a small percentage of these components will ever leak. Testing them all with a traditional "sniffer" takes a great deal of time and effort and may put the inspector in an unsafe environment.

Optical gas imaging cameras give you the power to spot invisible gases as they escape, so you can find fugitive emissions faster and more reliably than with sniffer detectors. With a FLIR G-Series camera, you can document gas leaks that lead to lost product, lost revenue, fines, and safety hazards.

From natural gas extraction to petrochemical operations and power generation, companies have saved more than \$10 million annually in lost product by including FLIR optical gas imaging in their leak detection and repair (LDAR) programs.

KEY GASES DETECTED BY CAMERA

MAIN INDUSTRY / APPLICATION

Oil and Gas Regulatory Compliance	Utility Hydrogen Leak Detection	Steel Safety & Environmental Stewardship	Oil and Gas Safety & Large Emission Event Detection	Chemical Safety & Environmental Compliance	Utility Environmental Stewardship	Food & Beverage Safety & Productivity
---	---	--	---	--	---	---

TRACK LEAKS TO THEIR SOURCE

G-Series optical gas imaging cameras can detect natural gas, SF₆, and CO₂ leaks quickly, accurately, and safely without the need to shut down systems, or the need for contact with the components. Gas leaks that are invisible to the naked eye look like smoke on infrared optical gas imaging cameras, making them easy to see – even from a distance.

WITH FLIR OPTICAL GAS IMAGERS, YOU CAN:

- Scan broad areas quickly, from a safe distance
- Survey hard-to-reach connections and fittings
- Improve compliance with environmental regulations
- Check electro-mechanical systems for signs of failure, using temperature measurement capability
- Check tanks for leaks, level and efficiency

A LEAKING PRESSURE GAUGE

CAPTURED GAS LEAK

LEAK IS CLEARLY VISIBLE ON THE THERMAL IMAGE

HANDHELD CAMERAS

When you need to survey large work areas for industrial gas or chemical leaks, a handheld optical gas imaging camera can help you get the job done quickly and efficiently. Cameras such as the Gx320, G306 and G346 allow you to check every component throughout multiple sites, and are ergonomically designed for comfortable, all-day use. These cameras also offer features such as temperature calibration for improved contrast between the gas compound and the background scene.

G-SERIES HANDHELD CAMERAS ARE IDEAL FOR:

- Natural gas wellsites
- Chemical processing plants
- Electrical substations
- Manufacturing plants
- Power generators
- Refineries

FIXED CAMERAS

Have a need for continuous monitoring or automated leak detection in critical areas? With thermal imaging cameras such as the G300a and GF77a, you can constantly monitor vital gas pipelines, installations, and critical components in remote or difficult to access zones. You will immediately see if a dangerous and costly gas leak appears. Monitoring is performed from a safe distance without the need to send technicians into potentially dangerous areas.

G300a AND GF77a CAMERAS ARE IDEAL FOR:

- Offshore oil platforms
- High value well sites
- Natural gas processing plants
- Underground storage facilities
- Biogas generation plants
- Critical pipeline crossings
- Petrochemical facilities
- Compression stations

HELPFUL ACCESSORIES

FLEXIBLE SYSTEMS THAT MEET YOUR CHANGING NEEDS

No other thermal imaging camera manufacturer offers a wider range of accessories than Teledyne FLIR. Hundreds of accessories are available to customize our cameras for a wide variety of imaging and measurement applications, including a comprehensive range of lenses, LCD screens, remote control devices, and more.

SCAN BROAD AREAS QUICKLY, FROM A SAFE DISTANCE

VISIBLE IMAGE

INFRARED IMAGE

HIGH SENSITIVITY MODE

METHANE & HYDROCARBONS

FLIR GF77™

Gas Find IR with LR lens

The FLIR GF77 with the LR (7-8.5 μm) lens—designed exclusively for the GF77 uncooled optical gas imaging camera—visualizes methane in real time for faster, more efficient gas leak surveys. This affordable solution is useful for both gas detection and radiometric temperature measurement, so you can safely locate leaks and perform accurate thermal inspections using one camera.

GF77 CAMERAS WITH LR LENSES ARE IDEAL FOR:

- Electric power utilities
- Oil and natural gas operations
- Chemical/manufacturing facilities
- First responders

FLIR GF77a™

Fixed Gas Find IR

The FLIR GF77a provides continuous, autonomous leak detection for methane. This uncooled, fixed OGI camera can help you better maintain valuable capital equipment, avoid product loss, meet emissions reduction metrics, and ensure safer work practices. With advanced connectivity features that meet current industry protocols, this camera will integrate seamlessly into your current ecosystem.

GF77a CAMERAS ARE IDEAL FOR:

- Upstream oil and gas facilities
- Transportation terminals
- Power generation plants
- Midstream gas processing facilities

FLIR G300a™

The FLIR G300a is a cooled, fixed camera that detects hydrocarbons and volatile organic compound (VOC) leaks that are harmful to the environment. It allows users to continuously monitor installations in remote areas or hazardous zones that are difficult to access, so inspectors can take immediate action to repair dangerous or costly leaks. The G300a is easily controlled over Ethernet from a safe distance and can be integrated in a TCP/ IP network. With a robust but small frame, the G300a also integrates to an aerial platform for OGI inspections from the sky.

G300a CAMERAS ARE IDEAL FOR:

- Oil refineries
- Natural gas processing plants
- Offshore platforms
- Chemical/petrochemical complexes
- Biogas and power generation plants
- Regulatory compliance

VENTING STORAGE TANK PRESSURE RELIEF VALVE

NATURAL GAS LEAK ON COMPRESSOR VALVE

METHANE LEAK AT NATURAL GAS FACILITY SITE

METHANE & HYDROCARBONS

FLIR **Gx320™**

FLIR **G620™**

FLIR **Gx620™**

The FLIR Gx320, G620, and Gx620 are cooled OGI cameras that are filtered to detect methane and hydrocarbon emissions from the production, transportation, and processing facilities in the oil and gas industry. Survey large areas up to nine times faster than with traditional gas sniffer methods to catch leaks early and reduce emissions.

Providing up to 640 × 480 IR resolution (G620 & Gx620) and highly accurate temperature measurements, inspectors can assess and improve thermal contrast between the gas cloud and the background.

The Gx320, G620, and Gx620 are verified to meet sensitivity standards defined in the US EPA's 0000a methane rule and meet reporting requirements by tagging each recording with GPS data. By finding leaks and fixing them quickly, companies can protect the environment while avoiding product losses and regulatory fines.

Safely scan for gases at great distances on difficult to monitor components, check thousands of connections quickly, and pinpoint the smallest leaks.

HAZARDOUS LOCATIONS

The FLIR Gx320 and Gx620 allow you to quickly detect and visualize fugitive natural gas emissions while maintaining safety inside hazardous locations. These OGI cameras are certified for use in Class 1; Division 2 or Zone 2 **hazardous locations**, improving worker safety and potentially reducing pre-survey paperwork (depending on company protocols).

THE Gx320/G620/Gx620 DETECT NEARLY 400 GASES, INCLUDING:

- | | | |
|-------------|----------------|------------|
| • Methane | • Pentane | • Toluene |
| • Methanol | • 1-Pentene | • Octane |
| • Propane | • Isoprene | • Heptane |
| • Benzene | • Butane | • Xylene |
| • Ethane | • Ethylbenzene | • Ethylene |
| • Propylene | • MEK | • Hexane |
| • Ethanol | • MIBK | |

THE Gx320, G620, AND Gx620 ARE IDEAL FOR:

- Offshore platforms
- Liquid natural gas shipping terminals
- Oil refineries
- Natural gas wellheads and processing plants
- Compressor stations
- Bio-gas and power generation plants

Gx320 & Gx620: SAFETY ZONE COMPLIANT

At offshore rigs, well sites, and production plants, there's often a risk of gas collecting and igniting with a stray spark or hot surface. Working in these areas requires special clothing and equipment – if it's possible.

The oil and gas industry has long awaited a gas detection solution such as the Gx320 & Gx620, because its hazardous location designation allows the user to work confidently and focus on the job at hand.

THE Gx320 AND Gx620 HAVE THE FOLLOWING CERTIFICATIONS:

ATEX/IECEx, Ex ic nC op is IIC T4 Gc II 3 G
ANSI/ISA-12.12.01-2013, Class I Division 2
CSA 22.2 No. 213, Class 1 Division 2

THE MOST ADVANCED GAS VISUALIZATION AND IN-CAMERA GAS LEAK QUANTIFICATION

At Teledyne FLIR, we understand that the work you do is critical and dangerous. That's why we designed the FLIR G-Series to help you do your job safer and more efficiently.

FLIR G-Series OGI cameras bring you wireless connectivity, interchangeable lens options, an ergonomic rotating touchscreen, and in-camera gas quantification* to expand your inspection capabilities.

- Quantify gas leak size and type within the camera, eliminating the need for a secondary device*
- Comfortably inspect from any distance with quick-swap interchangeable lenses
- Streamline the inspection process with Multi-REC (recording mode), which allows you to record across various video types including infrared, high sensitivity mode (HSM), and visual
- Instantly connect to smartphones or tablets with advanced built-in Wi-Fi and Bluetooth®
- Automatically upload and store saved images/videos to FLIR Ignite cloud software while in the field

*Gx320, Gx620, and G620 models only

CARBON DIOXIDE

FLIR G343™

The G343 lets you see carbon dioxide (CO₂) leaks quickly and accurately, whether the gas is the result of a production process, part of an Enhanced Oil Recovery program, or being used as a tracer gas for hydrogen. CO₂ is a primary greenhouse gas, with emissions resulting not only from the combustion of fossil fuels, but also from industrial processes, oil production, and manufacturing. Reliable non-contact CO₂ detection allows plants to inspect equipment while it is still online in the course of normal operations, avoiding unplanned outages. It also helps keep operations safe while moving towards carbon-neutral capture and storage operations.

G343 CAMERAS ARE IDEAL FOR:

- Enhanced Oil Recovery programs
- Hydrogen-cooled power generators
- Carbon capture systems
- Ethanol producers
- Industrial tightness testing

CARBON MONOXIDE

FLIR G346™

The FLIR G346 exposes invisible, odorless carbon monoxide (CO) emissions from a safe distance. CO leaking from vent stacks or pipes can be deadly, especially if the gas is allowed to collect in an enclosed area. The G346 can quickly scan broad areas and pinpoint even small leaks from several meters away, increasing worker safety and protecting the environment.

G346 CAMERAS ARE IDEAL FOR:

- Steel industry
- Bulk chemicals manufacturing
- Packaging systems
- Petrochemical industry

G346 DETECTS CARBON MONOXIDE AND THE FOLLOWING GASES:

- | | |
|------------------------|----------------------|
| • Acetonitrile | • Ethenone |
| • Acetyl cyanide | • Ethyl thiocyanate |
| • Arsine | • Germane |
| • Bromine isocyanate | • Hexyl isocyanide |
| • Butyl isocyanide | • Ketene |
| • Chlorine isocyanate | • Methyl thiocyanate |
| • Chlorodimethylsilane | • Nitrous oxide |
| • Cyanogen bromide | • Silanev |
| • Dichloromethylsilane | |

REFRIGERANTS

FLIR G304™

The FLIR G304 detects refrigerant gas leaks without interrupting or shutting down operations. Most modern refrigerants are organofluorine compounds, and while they are not ozone-depleting, some blends contain Volatile Organic Compounds (VOCs). Refrigerants are used in a variety of systems, including food production, pharmaceutical storage, and air conditioning.

G304 DETECTS THE FOLLOWING REFRIGERANT GASES:

- | | | |
|---------|----------|---------|
| • R22 | • R245fa | • R417A |
| • R125 | • R404A | • R422A |
| • R134A | • R407C | • R507A |
| • R143A | • R410A | |

SULFUR HEXAFLUORIDE AND AMMONIA

FLIR G306™

The FLIR G306 detects SF₆ – used to insulate high voltage circuit breakers – as well as the industrial refrigerant and fertilizer anhydrous ammonia (NH₃). SF₆ is a potent greenhouse gas, with a global warming potential that's 22,000 times greater than CO₂ over a 100-year period. By detecting and repairing SF₆ leaks, energy producers can avoid costly damage to circuit breakers while protecting the environment.

G306 DETECTS THE FOLLOWING GASES:

- | | | |
|----------------------------|-----------------------------------|------------------------------|
| • Acetic acid | • Ethyl cyanoacrylate (superglue) | • Propenal |
| • Acetyl chloride | • Ethylene | • Propene |
| • Allyl bromide | • Freon-12 | • Sulfur hexafluoride |
| • Allyl chloride | • Furan | • Tetrahydrofuran |
| • Allyl fluoride | • Hydrazine | • Trichloroethylene |
| • Anhydrous ammonia | • Methylsilane | • Uranyl fluoride |
| • Bromomethane | • Methyl ethyl ketone (MEK) | • Vinyl chloride |
| • Chlorine dioxide | • Methyl vinyl ketone | • Vinyl cyanide |
| | | • Vinyl ether |

FLIR GF77™

Gas Find IR with HR lens

The FLIR GF77 with the HR (9.5-12 μm) lens—designed exclusively for use with this uncooled OGI camera—detects and visualizes sulfur hexafluoride (SF₆), ethylene, and ammonia. This affordable solution is useful for both gas detection and radiometric temperature measurement, so you can safely locate leaks and perform accurate thermal inspections using one camera.

G304 CAMERAS ARE IDEAL FOR:

- Food production, storage, and retail
- Automotive production and repair
- Air conditioning
- Pharmaceutical production, transport, and storage

G306 CAMERAS ARE IDEAL FOR:

- Utilities
- Ammonia plants
- Industrial refrigeration systems
- Chemical plants

GF77 CAMERAS WITH HR LENSES ARE IDEAL FOR:

- Electric power utilities
- Oil and natural gas operations
- Chemical/manufacturing facilities
- Food and agriculture
- First responders

FLIR PORTABLE INFRARED AND ACOUSTIC CAMERA SOFTWARE

FLIR helps you work more efficiently and boost productivity with a robust software suite, routing plugins, and cloud storage.

SOFTWARE AND CLOUD SOLUTIONS

FLIR Thermal Studio Pro, FLIR Ignite Cloud storage, and FLIR route management provide the total solution your team needs to streamline inspections, analysis, and reporting.

FLIR Thermal Studio Pro: Build an efficient survey roadmap with the FLIR Route Creator software plugin, then download and run it using the Inspection Route feature on your camera. Once your inspection is complete, bring the images back into FLIR Thermal Studio for processing, analysis, and reporting.

For acoustic imaging, the FLIR Si124 comes with a software plugin for FLIR Thermal Studio Pro that allows you to calculate critical decision-making data such as leak rates, costs, and level of threat from partial discharge.

FLIR Ignite: Upload images wirelessly to this cloud-based service, which automatically manages the safe and secure back-up of your data and instantly shares the content with authorized team members.

FLIR SOFTWARE DEVELOPMENT SOLUTIONS

FLIR's Software Development Kit (ATLAS SDK) allows companies to use their own Computerized Maintenance Monitoring Systems (CMMS) to support read-out of thermal measurements as well as inclusion of METERLiNK® data, GPS, compass, and other important parameters embedded within the image.

THE INFRARED TRAINING CENTER

THERMAL AND OPTICAL GAS IMAGING VALUE

The greater your knowledge of thermal and optical gas imaging, the greater the dividends you'll realize for your company and your career. That's why the Infrared Training Center (ITC) offers classes for many industry applications—from free online courses to advanced certification training.

ITC courses include:

- Optical Gas Imaging Certification Course
- OGI Fundamentals Online Course
- Level I, II, and III Thermography Courses
- Electrical Inspection and Level I Electrical Thermography Courses

WORLD-CLASS INFRARED TRAINING

ITC thermography certification courses help prepare you to take a leadership role in an infrared or optical gas inspection program. Level I certifies that you know how a thermal camera or optical gas imager works and how to use it. Level II cranks up your credibility with more in-depth concepts and intensive labs. Level III asserts that you have the knowledge and skills to develop and administer your company's thermography or optical gas imaging program. These certifications offer strong validation to support the work you do.

ITC offers classes at training centers around the globe, at locations within your country, at your company's facility, and even online. On-site training is encouraged if your company needs to certify a group of 10 or more. ITC's on-site training courses are the best way to accommodate a large group on a limited budget. Our instructors will travel directly to your facility to limit your travel costs by keeping staff on site, reducing downtime and short staff issues.

Visit <https://flir.com/ITC-onsite-training> for more information about on-site training. For a complete list of courses and a current schedule, visit infraredtraining.com.
